AB A process for prepg. amorphous **paroxetine**-HCl or sertraline-HCl is provided, which comprises prepg. a soln. in which **paroxetine**-HCl or sertraline-HCl and a water-sol. polymer is dissolved in a co-solvent of a volatile org. solvent and water. Thus, granules were obtained from **paroxetine**-HCl 44.43, Povidone-K30 88.86, and Avicel PH-101 88.86 mg/tablet. The granules were blended with Cospovidone, microcryst. cellulose and Mg stearate to give a blend. This blend was compressed into tablets with a tablet wt. of 400 mg.

AB A water-dispersible formulation of **paroxetine** for immediate oral administration comprises a dry blend of **paroxetine**, a water-sol. dispersing agent, and a taste-masking agent, as a dispersible powder or molded into a tablet. For example, a water suspension contg. **paroxetine**, methacrylic acid copolymer, talc, and tri-Et citrate was spray dried. The spray dried material and polyvinylpyrrolidone, calcium carbonate, microcryst. cellulose, citric acid, flavor, sweetener, and Mg stearate were sieved, blended, and then compressed into tablets.

AB Pharmaceutical oil-in-water emulsions for delivery of polyfunctional active ingredients with improved loading capacity, enhanced stability, and reduced irritation and local toxicity are described. Emulsions include an aq. phase, an oil phase comprising a structured triglyceride, and an emulsifier. The structured triglyceride of the oil phase is substantially free of triglycerides having three medium chain (C6-C12) fatty acid moieties, or a combination of a long chain triglyceride and a polarity-enhancing polarity modifier. The present invention also provides methods of treating an animal with a polyfunctional active ingredient, using dosage forms of the pharmaceutical emulsions. For example, an emulsion was prepd., with cyclosporin A as the polyfunctional active ingredient dissolved in an oil phase including a structured triglyceride (Captex 810D) and a long chain triglyceride (safflower oil). The compn. contained (by wt.) cyclosporin A 1.0, Captex 810D 5.0, safflower oil 5.0, BHT 0.02, egg phospholipid 2.4, dimyristoylphosphatidyl glycerol 0.2, glycerol 2.25, EDTA 0.01, and water up to 100%, resp.

AB The present invention relates to triglyceride-free pharmaceutical compns., pharmaceutical systems, and methods for enhanced absorption of hydrophilic therapeutic agents. The compns. and systems include an absorption enhancing carrier, where the carrier is formed from a combination of at least two surfactants, at least one of which is hydrophilic. A hydrophilic therapeutic agent can be incorporated into the compn., or can be co-administered with the compn. as part of a pharmaceutical system. The invention also provides methods of treatment with hydrophilic therapeutic agents using these compns. and systems. For example, when a compn. contg. Cremophor RH40 0.30, Arlacel 186 0.20, Na taurocholate 0.18, and propylene glycol 0.32 g, resp., was used, the relative absorption of PEG 4000 as a model macromol. drug was enhanced by 991%.

AB Several strategies to improve the sepn. of 11 central nervous system drugs

(antipsychotics and antidepressants) with capillary zone electrophoresis were applied: the variation of the pH of the buffering background electrolyte, its ionic strength, addn. of inclusion-complex forming .beta.-**cyclodextrin** or polyvinylpyrrolidone (PVP), resp., as a replaceable, sol., polymeric pseudo-stationary phase. Best sepn. was achieved at pH 2.5 and 35 mmol/l ionic strength (phosphate buffer), with 0.5% (w/v) PVP.
